SUMMARY

Backend Developer with 5 years of experience (Nov 2021 – Oct 2026) building and scaling backend systems in Go (Golang), Python and Django for MLM and e-commerce SaaS platforms serving 10,000+ users. Experienced in REST API design with Django REST Framework and Go, microservice architecture, PostgreSQL, third-party and payment gateway integrations, asynchronous processing with Celery, and containerized deployments with Docker. **Available to join immediately; open to relocation.**

TECHNICAL SKILLS

Languages: Go (Golang), Python, SQL, JavaScript (Node.js), HTML/CSS
Frameworks: Django, Django REST Framework, Bootstrap
Backend & APIs: REST API Design, Microservices, Concurrent Programming, Swagger/OpenAPI, Celery (Asynchronous Task Processing), Third-Party & Payment Gateway Integration, MVC
Databases: PostgreSQL, MySQL
Tools & Platforms: Docker, Git, GitHub, Bitbucket, AWS CodeCommit, Postman, Selenium, Linux/Unix, Shell Scripting
AI/LLM: OpenAI/Anthropic API Integration

PROFESSIONAL EXPERIENCE

Software Engineer (Backend) — Epixel Solutions Pvt Ltd Nov 2021 – Oct 2026

- Developed and maintained MLM and e-commerce SaaS platforms serving **10,000+ users** across multiple client projects, using Go, Python and Django, with continuous live production updates and minimal downtime.
- **Python/Django:** Built Django REST Framework APIs and PostgreSQL-backed modules for user hierarchies, orders, commissions and payouts, where correctness directly affects every member's earnings.
- **Go (Golang):** Built and maintained high-performance, concurrent Go services and APIs alongside the Django codebase, supporting the platform's microservice architecture.
- Diagnosed and fixed **deadlocks in Dockerized Go services**, traced to mutexes that were locked but never released, making the services stable under concurrent load.
- Redesigned monolithic components into a microservice architecture using MVC design patterns, making the codebase easier to scale and maintain across multiple teams.
- Designed REST APIs documented with Swagger, and integrated third-party APIs including payment gateways to streamline transaction processing and reduce manual work in order fulfillment.
- Tuned PostgreSQL schemas and queries for data-heavy genealogy and transaction workloads behind commission and payout runs.
- Containerized applications with Docker across development, staging and production, and automated the release workflow with Docker, Selenium checks and shell scripts, turning a manual multi-step deployment into a few commands.

EDUCATION

Bachelor of Computer Applications (BCA) — Indira Gandhi National Open University (IGNOU) | Pursuing

Diploma in Computer Engineering — Seethi Sahib Memorial Polytechnic College, Tirur
Department of Technical Education, Kerala | 2018 – 2021 | CGPA: 8.8/10.0
Relevant Coursework: Computer Programming, Database Management Systems, Web and Mobile Application Development, System Administration, Computer Architecture.

Higher Secondary Education — Devadhar Govt. Higher Secondary School, Tanur, Malappuram, Kerala
Directorate of Higher Secondary Education, Kerala | Completed 2018

CORE COMPETENCIES

Backend Development, REST API Design & Documentation, Microservice Architecture, Concurrent Programming, Third-Party API Integration, Database Management, Containerized Deployment, Version Control (Git), Debugging & Troubleshooting, Problem-Solving, Team Collaboration

LANGUAGES

English, Hindi (Read & Write), Malayalam
