ABDUL HISHAM U

Backend Developer | Kochi, Kerala, India
+91 8111805239 | abdulhishaminfo@gmail.com | uahisham.github.io

PROFESSIONAL SUMMARY

Backend Developer with 5 years of experience building and scaling backend systems in Python/Django and Go (Golang) for MLM and e-commerce SaaS platforms serving 10,000+ users. Experienced in REST API design with Django REST Framework and Go, microservice architecture, concurrent programming, PostgreSQL optimization, payment gateway integrations, asynchronous processing with Celery and containerized deployments with Docker. Immediate joiner, open to relocation.

TECHNICAL SKILLS

Languages: Python, Go (Golang), SQL, JavaScript, HTML/CSS
Frameworks: Django, Django REST Framework, Django ORM, Celery, Node.js, Bootstrap
Backend & Architecture: REST API Design, Microservices, Concurrent Programming, Swagger/OpenAPI, MVC, Asynchronous Processing, Third-Party & Payment Gateway Integration
Databases: PostgreSQL (schema design, query optimization, indexing), MySQL
DevOps & Tools: Docker, Docker Compose, Linux/Unix, Shell Scripting, Git, GitHub, Bitbucket, AWS CodeCommit, Postman, Selenium
AI / LLM: OpenAI and Anthropic API integration

PROFESSIONAL EXPERIENCE

Software Engineer (Backend) | Epixel Solutions Pvt. Ltd. | Nov 2021 – Oct 2026

Product company building MLM and e-commerce SaaS software for multiple client businesses.

- Developed and maintained MLM and e-commerce SaaS platforms serving **10,000+ users** across multiple client projects on one core codebase, shipping continuous live production updates with minimal downtime.
- Built Django and Django REST Framework APIs with PostgreSQL-backed modules for user hierarchies (genealogy trees), orders, commission calculation and member payouts, where correctness directly affects every member's earnings.
- Built and maintained high-performance, concurrent **Go (Golang)** services and APIs alongside the Django codebase, handling compute-heavy workloads within the platform's microservice architecture.
- Diagnosed and fixed **deadlocks in Dockerized Go services**, traced to mutexes that were locked but never released, making the services stable under concurrent load.
- Redesigned monolithic components into a **microservice architecture** using MVC design patterns, making the codebase easier to scale and maintain across multiple teams.
- Designed REST APIs documented with Swagger/OpenAPI for web, mobile and third-party clients, and integrated **payment gateways** to streamline transaction processing and order fulfillment.
- Optimized **PostgreSQL** schemas, indexes, queries and Django ORM usage for data-heavy genealogy and transaction tables behind reports and payout runs, and moved slow work to **Celery** background tasks to keep API responses fast.
- Containerized applications with **Docker** and Docker Compose, standardizing development, staging and production environments for the team.
- Automated the release workflow with Docker, Selenium checks and shell scripts, turning a manual multi-step deployment into a few commands.

KEY PROJECTS

MLM Commission & Payout Engine | Python, Django, DRF, PostgreSQL, Celery

- Core backend for genealogy trees, member hierarchies, orders, commission calculation and payouts, running for 10,000+ users across multiple client deployments.

Concurrent Go Services | Go, Docker, REST APIs, Microservices

- Performance-critical Go services running alongside Django; found and fixed mutex deadlocks to keep them stable under concurrent load.

EDUCATION

Bachelor of Computer Applications (BCA) | Indira Gandhi National Open University (IGNOU) | Pursuing
Diploma in Computer Engineering | Seethi Sahib Memorial Polytechnic College, Tirur | 2018 – 2021 | CGPA 8.8/10
Higher Secondary (Class XII) | Devadhar Govt. Higher Secondary School, Tanur | 2018

CERTIFICATIONS & LANGUAGES

Certifications: IBM: Cloud Essentials, Introduction to Cloud, Serverless Computing | Cognitive Class: SQL & Relational Databases 101, NoSQL & DBaaS 101, Python 101 (2020)
Languages: English, Malayalam, Hindi
